I'm a final-year Information Technology student with a strong passion for learning and building useful tools. I enjoy designing and developing real apps using Flutter, with a focus on clean and easy-to-use UI/UX. I've built simple, practical apps for customers - like small debt-tracking apps - that help people manage their daily tasks more easily. These projects gave me real experience working with clients and solving real problems. I've also studied C#, HTML/CSS, PHP, ASP.NET, AJAX, and more, which helps me build complete and functional systems. I'm always curious, eager to grow, and excited to join a team where I can learn more and help create helpful, user-friendly products.

## Work History

2025 – present

### Debt Book App – Personal - Bachelor Graduation Project

Flutter Developer

- Built a mobile app using Flutter to help customers track and manage debts in a simple and smooth way, focusing on clean UI/UX.
- Used SQLite for local data storage, and added data backup features to protect user information.
- Supported both English and Arabic languages, and included dark/light mode for better user experience.
- Managed app state and navigation using GetX and Provider, and optimized overall performance for reliability.
- Handled the full development cycle from planning to testing, gaining hands-on experience in solving real-world problems.

2024-02 – 2024-09

### Smart recruitment platform - Diploma Graduation Project

Flutter Developer

- Developed a recruitment app with separate views for job seekers and companies, each with personalized pages and features.
- Made it easy for companies to post job openings and for users to browse and apply smoothly.
- Included profile pages where users and companies could show details and receive ratings from others.
- Built features like following/unfollowing accounts, real-time chat and messaging, and smooth interactions between users and companies.
- Implemented email registration with verification codes for secure account setup.
- Added an admin dashboard to manage user accounts, including blocking, unblocking, and other control functions.
